I am a passionate Backend Developer driven by programming and continuous learning. I built a secure Employee Portal using Laravel, Eloquent, MySQL, and Sanctum, evolving it from role-based to permission-based access control with optimized backend logic. For my thesis, I developed the PSAU Alumni Portal with Tracing and Job Matching, integrating a Multilayer Perceptron Classifier and Cosine Similarity for partner relevance. These projects showcase my ability to architect scalable systems, apply business solutions through programming, and document backend processes with clarity.

Work Experience

Back End Developer Intern, Trackerteer Web Developer Corporation

Feb 2026 — May 2026, Clark, Philippines

- Developed and maintained a secure Employee Portal using Laravel, Eloquent, MySQL, and Sanctum, transitioning from role-based to permission-based access control.
- Optimized controller logic, queries, and pivot table updates to improve backend performance and ensure accurate task tracking across departments and sections.
- Collaborated with frontend developers on React/Tailwind integration, resolving resource handling and UI logic issues for smoother system functionality.
- Documented backend processes with clear, explanatory comments to support maintainability and guide future programmers.
- Assisted QA team with system documentation and debugging, ensuring stability and consistency during staging and deployment.

Projects

Trackerteer Employee Portal

- Designed and developed RESTful APIs in Laravel to handle authentication, task management, and resource allocation.
- Implemented Sanctum-based API authentication with token management, ensuring secure access across departments and sections.
- Transitioned system architecture from role-based to permission-based API endpoints, enabling fine-grained access control.
- Optimized API queries and controller logic to improve response times and maintain accurate task tracking.
- Delivered well-documented APIs for seamless integration with React/Tailwind frontend, supporting scalability and maintainability.

PSAU Alumni Portal with Tracing and Job Matching Algorithm

- Designed and implemented a university alumni portal featuring four access levels: Administrator, Partner Organization, College Coordinator, and Alumni.
- Integrated a Multilayer Perceptron (MLP) Classifier to provide intelligent job matching for alumni users, while Partner Organizations utilized Cosine Similarity for candidate relevance.
- Enabled career tracing and data-driven insights to support alumni engagement and employment outcomes.
- Demonstrated ability to merge backend engineering with applied machine learning for real-world solutions.

Education

B.S INFORMATION TECHNOLOGY, Pampanga State Agricultural University

June 2026, Pampanga, Philippines

Magna Cum Laude

ICT – Mobile Application and Web Development, STI College

May 2022, Pampanga, Philippines

With High Honors

Competition

HackforGov3 2024 Region 3 capture-the-flag competition

I competed in HackforGov3 as part of a four-member team representing our university. I served as the team leader, ensuring tasks were completed efficiently and assigning responsibilities based on each member's strengths.

Best Programmer, Graduating Class 2026 – IT Program

Won the Best Programmer of batch 2026 graduating IT Students award by solving CLI-based problems using PHP without internet access, relying solely on memory and IntelliSense. Demonstrated critical thinking under pressure, and precision in problem-solving.
